DETAILED ACTION

1. Applicant's election without traverse of Invention I in Paper No. 6 is acknowledged.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Dixon (4,508,138).

Dixon discloses an atomizing apparatus comprising: an outer cylinder 73, 93; an outlet 82; an inlet 71; a chamber 72; an inner cylinder 74, 79.

4. Claims 1-6 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Heath et al. (4,099,673).

Heath et al. discloses an atomizing apparatus comprising: an outer cylinder 12; an outlet 16; an inlet 34; a chamber 58; an inner cylinder 14; a plurality of pressure-leakage preventing members 90, 92, 98, 100, 106, 108; a screw 22. Screw 22 is connected to the inner cylinder 14 when inner cylinder 14 is abutting screw 22.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dixon (4,508,138) in view of Benton (329,881).

Dixon discloses the limitations of the claimed invention with the exception of the water passage. Benton teaches a water passage d4. It would have been obvious to a person having ordinary skill in the art at the time of the invention to have provided a water passage in the device of Dixon as taught by Benton to thaw fluid.

7. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dixon (4,508,138) in view of Young et al. (6,012,646).

Dixon discloses the limitations of the claimed invention with the exception of the conduit passage. Young et al. teaches a conduit passage (un-numbered, passage showing check valve) and a material supply port 24. It would have been obvious to a person having ordinary skill in the art at the time of the invention to have provided a conduit passage in the device of Dixon as taught by Young et al. to prevent over pressurization.
